

THE DEXTER ADVANTAGE

Predators are known for their ability to stop fast moving objects with ease. The Predator Series™ by Dexter Axle is designed to do the same for your trailer. Whether cruising down a country highway or navigating stop-and-go city traffic, the Predator DX2™ electric brake controller delivers the braking power you need. By integrating patented sensing technology with consumer demanded features and a seven-year warranty, the Predator DX2™ is built for performance and functionality. When it comes to stopping your trailer, demand better. Demand Dexter.

# PREDATOR DX2™ ELECTRIC BRAKE CONTROLLER

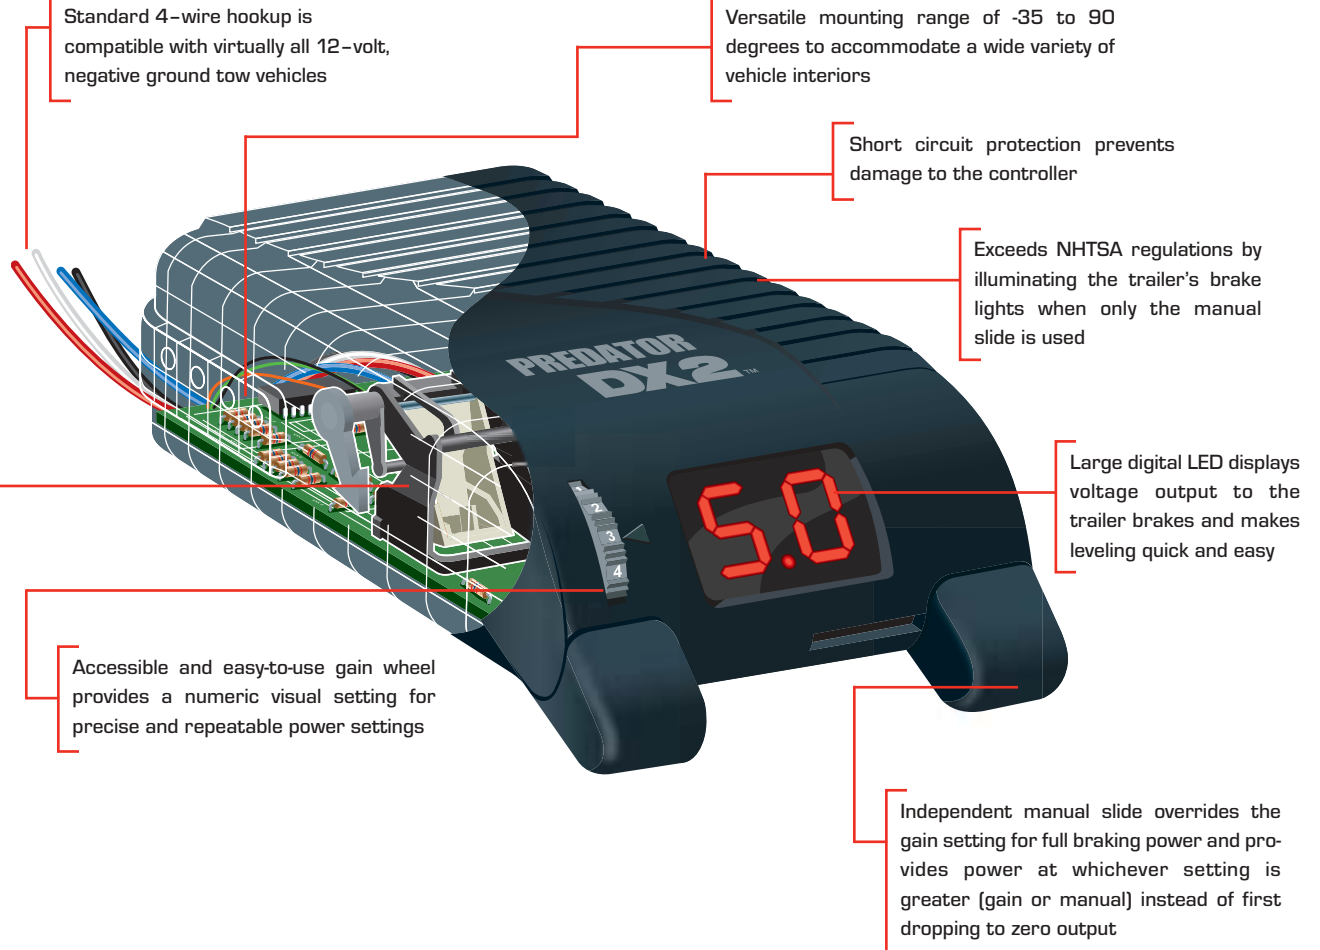

## THE INERTIA -ACTIVATED DIFFERENCE

Unlike time-based controllers which ramp up to full power on a pre-set time scale, the inertia-activated Predator DX2™ matches the driver's desired braking effort to actual brake output. Here's how it works...

1. A patented pendulum sensor in the controller reacts instantly to any change in tow vehicle deceleration.
2. When this change is detected and the brake pedal or manual slide is activated, the controller applies the trailer brakes at the same rate as the tow vehicle brakes.
3. The result is smooth, proportional braking between the trailer and tow vehicles.

## BRAKING POWER WHEN YOU NEED IT

Because it's inertia-activated, the Predator DX2™ can provide gradual power output which reduces over-braking and minimizes brake wear. When you need emergency braking for that panic situation, the Predator DX2™ delivers full braking power within 1 second. Time-based controllers can take up to 3-4 times longer.

## QUALITY YOU CAN COUNT ON

For over 40 years, Dexter Axle has led the industry with continuous innovation, uncompromised service, and consistent quality. You can be assured that the Predator Series™ by Dexter carries those same standards. Each controller we manufacture is 100% tested for functionality and quality
