

Safety Meeting Utility Lines

Company: _____ Presenter: _____ Date: _____

If you work with electricity, no matter how experienced you are, here are some things you must remember:

- * Obtain clearance from Utility prior to commencement of work.
- * Place circuit reclosures on "non-reclose" prior to commencing work.
- * Leave grounds and neutrals out of the work area. If not possible, cover them.
- * Maintain positive control of energized conductors at all times, with appropriate tools.
- * Plan ahead and discuss all moves with your pole partner before commencing work.
- * Maintain good communication with the utility and the employer.
- * Keep current on pole-top rescue and all safe practices.

SAFETY REMINDER: What other hazards do you work with? Could you become casual and careless about these?
