▶ **About TGC Global CSD**

Founded in 1999, TGC Global Inc. is a premier business consulting and technology services firm focused on achieving business results through the application of state-of-the-art information technology solutions. TGC Global's Communication Services Division (CSD) was organized to deliver innovative data, voice, video and high-capacity bandwidth services for Global 2000 Enterprises. TGC Global CSD provides advanced communication solutions that leverage the power of the latest technical advances in Dark Fiber Networks, Free Space Optics, and Satellite Communications.

TGC Global is headquartered in New York City with worldwide support capabilities throughout Europe, Asia, Africa, and North America.

▶ **Leverage Expert Communication Services**

Providing an effective communications infrastructure while simultaneously assessing and addressing the unique business needs of an organization, requires unmatched skill and dedication. At TGC Global CSD we offer expertise in the assessment and implementation of custom communication solutions that include Dark Fiber Networks, High-Speed Satellite Networks, and Optical Wireless/ Free Space Optics.

▶ **State-of-the-Art Dark Fiber Networks**

Experienced TGC consultants offer the knowledge to effectively develop and enhance your existing network and communications infrastructure, and are equipped to handle all aspects of a fiber project from design to implementation. TGC facilitates the build out of Private Fiber Networks that leverage optical networking technologies - allowing for maximum bandwidth and flexibility, while providing secure and reliable networking services over the fiber backbone.

▶ **High-Speed Satellite Networks**

Global organizations serving international or major markets rely on their communications infrastructure to support all mission critical business transactions. The ability to quickly and efficiently communicate worldwide is critical to business success, even in those areas where local infrastructure may be limited or unreliable.

High-Speed Satellite communications allow for reliable, fast, and secure voice and data transfer. TGC offers cost-effective solutions and the latest technological advances in satellite offerings.

▶ **Optical Wireless Solutions**

When realizing the vision of an all-optical network - and the ability to effectively transmit data over any distance - it is critical to consider those environments that may not require a layout of fiber optic cable. Free Space Optics, or Optical Wireless technologies, allow for the benefits of fiber optic communications and optical connectivity, without requiring fiber optic cable or spectrum licensing. TGC Global CSD has introduced Free Space Optic solutions to deploy at customer sites where rapid deployment, cost savings, performance, and security are critical factors. FSO freedom from licensing and regulation also translates into low start-up costs and rapid deployment, for virtually unlimited bandwidth.

▶ **TGC Global CSD Benefits:**

- ▶ Strategic partnership based upon experience and mutual trust.
- ▶ Increased reliability, speed, and security of communication services.
- ▶ Cost-effective communication packages.
- ▶ Focus on quality solutions and consistent customer satisfaction.
- ▶ Freedom and flexibility.

"TGC delivers cutting edge communication solutions and services that make a significant, positive impact within the business organizations of our valued customers. This strategic application of state-of-the-art technologies allows us to achieve greater business efficiency and competitiveness for our clients, ensuring long-term success."

Mayande P. Gowon
President & TGC Global CSD Founder
