

## Benefits of Argentyn 23<sup>®</sup> Bio-Active Silver Hydrosol<sup>™</sup>

To support your immune system for all of its needs,\* choose Argentyn 23<sup>®</sup> Bio-Active Silver Hydrosol<sup>™</sup> — the #1-selling professional silver supplement in America. It has a unique combination of five benefits no other manufacturer can match:

### Actively Charged (Bio-Active)

As corroborated by a university study, Argentyn 23<sup>®</sup> contains 96% actively charged silver particles (positively charged [Ag+] silver ions), at least 55 times more powerful than other brands.

### Easily Absorbed

Argentyn 23<sup>®</sup>'s unprecedented particle size of 0.0008 microns, or 0.8 nanometers (validated by Transmission Electron Microscopy), allows for easy utilization by — and excretion from — the cells and body.

### Less Is More

Our ultrasmall particle size also results in a greater silver surface area. That's why even with a low concentration of 23 ppm (parts per million), Argentyn 23<sup>®</sup> is still much more effective than brands that contain up to 1000 ppm!

### Perfectly Safe\*

Argentyn 23<sup>®</sup> is formulated to be safe for the whole family. Taken 3 times a day for 70 years, Argentyn 23<sup>®</sup> still falls below the EPA daily Oral Silver Reference Dose (RfD).†

### 99.999% Pure

Argentyn 23<sup>®</sup> has only two ingredients: silver and pharmaceutical-grade purified water. It does not contain added salts or proteins that render other silver products ineffective and possibly dangerous. Plus, it is packaged in nonleaching glass bottles.

Silver is a universal antibiotic. When administered in the colloidal form, it is non-toxic. Just as we would die within a few minutes if our lungs were suddenly incapacitated, a microbe cannot live without proper respiration. It

suffocates and dies. More importantly, colloidal silver does not damage human enzymes or alter the body's chemistry.

Colloidal silver is a powerful, natural antibiotic and disinfectant. When next to bacteria, it inhibits the cell's metabolic enzymes necessary for energy utilization. Germs cannot build a resistance to the action of silver. There are no known organisms that can completely withstand the impact of silver.

Studies performed at the UCLA School of Medicine confirmed that

colloidal silver kills harmful bacterial, viral, and fungal organisms just minutes after contact. It does not affect the “good bacteria” of the digestive system, or the Doederlein bacillus, essential in preventing yeast infection in women. Therefore, probiotic programs can be continued while taking colloidal silver, without the fear of contradiction.

Rinse your mouth with it, gargle with it, soak dentures in it, and bad breath is a thing of the past. Use as a nasal spray. Drip into eyes and ears for minor infections or inflammations. We use it with low level laser therapy to disinfect extraction sockets.
