

## **Rhino Floor Mat Installation**

1. Lay the mats in the floor board area of the rhino.
2. If the bend is not exactly right for your rhino you can bend them fairly easily. If it is bent too far, turn it upside down and press downward with your foot. Most likely it won't be bent enough the other way.
3. Using the supplied self tapping screws screw them thru the holes in the mats into the plastic floor board.
4. How you line it up on the floor board is personal preference, best bet is to align the holes for the drains with the drains.
