

PERMA PIT

“The Permanent Pit Form”

A quick and easy way to form leveler pits.

- Perma Pit has 3 steel sides that act as form and curb angle. Everything is there to form the pit to the right size which eliminates costly mistakes.
- Perma Pit bolts together with 4 bolts which makes it quick and easy to set up, and saves time and money.
- Perma Pit is a permanent pit form that has a neat and clean appearance. No time is wasted returning to the site to strip wood forms.
- The Perma Pit System is inexpensive compared to materials and labor required to form a conventional pit for a dock leveler.
- Perma Pit is not part of the leveler. The leveler requires separate installation by the manufacturers' representatives which insures that the leveler is operating properly and has had the necessary adjustments. This eliminates aggravating return calls to make sure the leveler is working and that dock personnel are operating it properly. Should the leveler ever have to be removed from the pit (ex. relocation or major repair) it is a simple operation as opposed to removing pour-in type levelers.
