Minutes CHS Immunization Focus Group 4/28/10

Attendees CHS Immunization @ ACS Wednesday April 28, 2010

Tanya Ruth, ACS

Mary Thompson, ACS

Dmitry Berkovich, ACS

Deb Castellanos, ACS

Nancy Willie, Goodhue County

Karen Athman, Morrison

Gloria Stumpf, Morrison

Julie Gilkinson, Olmsted County

Nancy Pick, Olmsted County

Debra Durheim, Todd County

Webinar

Ane Rogers, Cass

Susanne

Mary Frahm, Clay

Deb Purfeerst, Rice

Betty Circle, Wadena

Julie DeMarre, Bloomington

Conversion – Deb c. gave a brief summary of the changes. Immunization elements will be in HL7 format. You will use PHDoc 2012 for all immunizations. On the Green Screen #1 work with transactions and #6 work with immunizations are missing. In PHDoc 2012 the immunizations are on the PHDoc Menu

We went through some of the options. Flow Sheet – grid is on the top with the tabs on the bottom. They are in alphabetic order. On the top you can move the columns around. Customize buttons are on the top and this is remembered by user. The priority order shows on the flow sheet. The flow sheet is converted from what you have today on the green screen. You will also have an audit tab which keeps track of changes and by whom.

Guardian Relationships – the responsible party are user defined. It will be also on you HL7. Today this doesn't have to be entered or go to MIIC.

Route Codes – these are also HL7 format.

Site Codes – These are HL7 format. Site tags are for the files coming back into PHDoc 2012.

Remember – when you make a change to inventory or any of the other immunization elements, you have to copy and download elements so that all can receive them.

Vaccine Inventory – updates given and on hand when you first come into this area. The yellow fields are mandatory. There was a discussion about the Primary dosage/Secondary dosage. The name will be changed to doses. ACS will program a drop down for the units i.e.: cc, ml...

Wish list item for vaccine inventory – give a warning if the age not between....

You will notice pop up bubbles throughout. They are helpful tips or will tell you what the field is for. This will help with entry.

Inventory history – inventory reports. Expires is in red, yellow tells when you are close to expiration. (60 days to yellow) On the immunizations given screen, it would be helpful to have the name and the folder.

Manufacture codes – ACS will deliver 62 codes. These are also HL7 format.

Vaccine Observation Codes – there are 4 different types. These were all delivered by ACS. Contraindications reactions are agency defined. These are all under the codes.

Vaccine Types – fields are longer. ACS delivered vaccine types and made them inactive. This is more for the return of imms from MIIC. There should be fewer errors as the type will be there for these shots.

VFC Eligibility codes – we went through the documentation.

Entry – we went through the documentation.

Where give is a free form field and does not have to be an element.

Default – this is remembered for all shots given for any client.

Reports – consent form, history report, letter, vaccine given

VFC Eligibility – “sent to the state” means to send the eligibility to state not the shot. Only 1 per year can be sent to the state.

Registry Profile – consent to share means that it goes to MIIC but MIIC does not share if you mark it N.

Name Conversion – use date range with the name. We recommend that you still email MIIC help desk to tell them that you sent a file.

Import/Export – went through documentation.

When fixing a record already sent to MIIC you have to manually fix in MIIC and then in PHDoc 2012 or the other way around.

We did not set a date for the next meeting but will probably be in the fall.

Minutes respectfully submitted by Nancy Pick, Olmsted County
